VOLUME 33 • NUMBER 4 • APRIL 2003

BY KRISTINA JACKSON

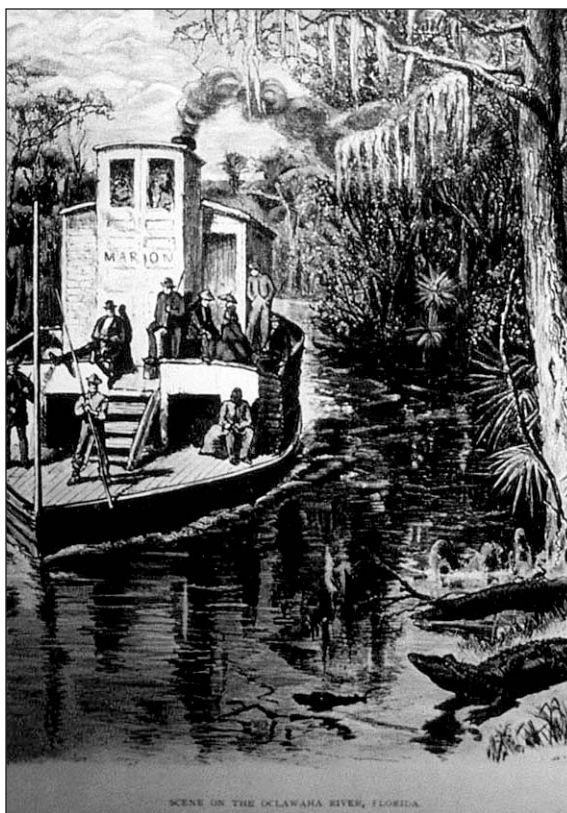

The dam saga continues...

The Rodman Reservoir park bill has again reared its ugly head in the Florida Legislature. Dam supporters have also introduced a resolution that would ask Congress to remove land from Ocala National Forest that is flooded by the reservoir. Since every state and national agency that has studied the issue supports restoration, the special interests are resorting to more political means to stop the project.

“Rodman Reservoir State Reserve” Bill (HB 697 & SB 2042) filed by Rep. Joe Pickens (R-Palaska) and Sen. Rod Smith (D-Alachua) would make Rodman Dam and Reservoir a state reserve. The intent of the bill is to keep the dam and reservoir as permanent structures on the Cross Florida Greenway and Ocala National Forest. The bill creates an additional legal hurdle to restoration by requiring new legislation for any action that would alter the reserve from its status on January 1, 2003.

Rodman Dam and Reservoir are unworthy of inclusion in Florida’s system of state parks and recreation areas. Restoration of the Ocklawaha River by removing Rodman Dam will provide for more diverse recreation and much better habitat for animals—key management goals of the Greenway.

“National Forest Lands/Palaska”

SCENE ON THE OCKLAWAHA RIVER, FLORIDA

Memorial (HM 1669 & SM 1656) urges Congress to transfer the approximately one square mile of Ocala National Forest that is flooded by the reservoir to the state of Florida. (A memorial is a non-binding resolution that does not go before the governor for veto or signature. Governor Jeb Bush strongly supports restoration and has a record of vetoing bills that support the dam.)

Removing land from a national forest solely to prevent an environmental restoration project would create a very harmful precedent. We must protect Ocala National Forest. Established by Theodore Roosevelt, this is our state’s oldest national forest.

Florida Defenders of the Environment asks you to write legislators to express your opposition to these anti-environmental proposals.

A letter to your state legislator is a simple but surprisingly effective weapon in the fight to protect our environment. When you write a letter, please copy it and send it to your congressperson as well. If this land transfer memorial passes, Congress may be asked to vote on it in the near future.

Contact information for your state and federal representatives is listed in the blue pages of the phone book or online at the Florida Legislature’s website, where you can read and track bills as well, <http://www.leg.state.fl.us/>

GENERAL MEETING

Thursday April 3rd, 7:30pm

UF Entomology & Nematology Building

(on campus, off Hull Road just east of the Center for Performing Arts complex)

Free the Ocklawaha River:

Breach Rodman Dam!

JOSEPH SIRY, OCKLAWAHA PROJECT COORDINATOR

Florida Defenders of the Environment

Removing Rodman (also known as Kirkpatrick) Dam is the longest unresolved conservation battle in Florida. Come learn about the historic citizens effort that resulted in stopping the Cross Florida Barge Canal and the political shenanigans that have kept the Rodman in place since.

Endorsements in Gainesville City Races

BY DWIGHT ADAMS, POLITICAL CHAIR

Our Group has endorsed in all three races for Gainesville City commission for the April 8 elections.

In all cases, the votes of both the political committee and Excom were nearly unanimous, with one or two abstentions. The regional political committee has unanimously approved the endorsements.

Our endorsements are: At-Large District 2—**Rob Brinkman**; At-Large District 1—**Warren Nielsen** (the incumbent); and in District 4—a dual endorsement of **Brad Guy** and **Craig Lowe**. These are all excellent candidates who will work for environmental protection and for social issues.

In District 4, both candidates have excellent records of public involvement and either of them should make a fine commissioner. Our dual endorsement means that we consider the two to be almost indistinguishable on issues of concern to us. Work for whomever appeals to you on this one, or just relax!

Rob Brinkman is a well-known environmental and community activist who is also a member of our Executive Committee.

He faces strong opposition from two candidates supported by pro-growth interests and will need all the support that we can give him.

Warren Nielsen, the incumbent, has a good environmental record and deserves to serve a second term. He, too, faces strong opposition from developer-backed candidates as well as others. His race is complicated by the wetlands referendum on which we are taking no position. Warren has worked diligently to get good provisions for protecting wetlands into the current city comprehensive plan, which backers of the referendum do not think are adequate. Backers of this referendum who do not vote for Warren must consider that this could result in election of a developer-backed candidate.

This time, it is critical that we not repeat the mistakes of one year ago—divide our votes and fail to work for the best environmental candidates. We all know the results: take-over of city hall by pro-growth interests. If you are not doing so already, get in touch with one or more of these campaigns. We have about 800 members in Gainesville and can make a difference if we all vote and make sure that 20 friends do also.

Comp Plan: What We Have Lost

BY KATHY CANTWELL

By a predicted 3 to 2 vote, the Alachua County developer and land speculator financed commissioners (Long, Pinkoson and Chestnut) approved a mediation settlement agreement that essentially guts the progressive 2002 Alachua County Comprehensive Plan (dissenting from the majority, Penny Wheat and Mike Byerly.)

WHAT THE DEVELOPERS GOT THEM TO TAKE OUT:

• Wetland Buffers for Endangered Species

They agreed to only use the federal and state lists for endangered species, dropping the more scientifically accepted FNAI, FCREPA and FDACS lists. This eliminates 44% of rare and threatened wetland dependent vertebrates from protection. On top of that, they lowered the buffers required in those wetlands from 300' to 100'. The County's own data and analysis showed that that will only protect 10-20% of wetland dependent species. I'm not even sure why they bothered with the buffer, it is so inadequate!

• Strategic habitat for Endangered Species

In the 2002 plan, 60 to 80% of the habitat that was deemed critical for endangered species would have to be set aside and left open. The developer could have as many houses built on the property as he could have in the 1991 plan but he would have to concentrate them on smaller lots. Now he only has to set aside 50% of the property. The lists that would be used to determine what species would be considered endangered, and therefore what habitat would be protected, were weakened as well.

• Conservation Lands

In the 2002 plan, property that was considered unique but was not considered habitat for endangered species would have to

preserve 60 to 80 % of its unique features. Now only 25% of those features need to be protected that is upland! And the county is to only base those decisions on one study map (the KBN-Goulder study of Alachua County) rather than the 9 maps (Water Management District maps, Florida Green way Maps, etc.) that can tell where to look for unique features.

• Rural Clustering

In the 2002 Comprehensive Plan, developments outside the Urban Cluster Line (the line set up in 1991 to define how far out we wanted intense growth to occur) would have to cluster their development on 20 to 40 % of the property. They could build as many houses on the property as they could in the 1991 plan, they just had to "cluster" them on smaller lots. This would have left perpetually open space for water recharge, agricultural use and/or wildlife corridors. This is essential in the western part of the county, considered one of the highest water "recharge" or filtering areas in the state for the Floridan Aquifer, the source of our drinking water.

A scientist at the University of Florida, Tom Hocht, who specializes in determining needed corridors for wildlife, has predicted, using GIS mapping, that the gutted comprehensive plan will take out as much as 130,000 acres from the permanent protection the progressive 2002 plan could have potentially given!

• Urban Service Line

The 2002 Comprehensive Plan tried to control sprawling growth and preserve existing infrastructure such as roads and schools. It was attempting to do this by limiting growth in the western part of the county for the next ten years. It did this by linking growth to where we have already existing water and sewer lines. The gutted plan now puts 2/3 of that land back on

see COMP PLAN page 5

WHAT YOU CAN DO:

- Contribute to legal fund (make tax-exempt check to TSCF, memo SSJG, mail to Suwannee-St. Johns Group, PO Box 13951, Gainesville, FL 32604)
- Phone commissioners at: 374-5210 (Tell Rodney Long, Lee Pinkoson and Cynthia Chestnut how unhappy you are with their vote, thank Penny Wheat and Mike Byerly for their dissenting vote)
- Email commissioners at: boccc@co.alachua.fl.us (put stop sprawl as subject, they may not read it!)
- Write to commissioners urging keeping 2002 Plan: BoCC, PO Box 2877, Gville, FL 32602
- Write to Gainesville Sun: voice@gvillesun.com
- Attend hearing on the amended plan (call 374-5249 to get on notification list, or call 378-5129, or 332-8831)
- Copy this and give to friends, neighbors, and co-workers, urging them to become involved or LEARN TO ENJOY SOUTH FLORIDA TYPE SPRAWL
- Call 378-5129 or 332-8831 for more info or to find out more about how you can help.

Marion County News

BY MARGIE BIELLING

Spring is here and SCG is still going strong. More than a year and a half since our inception, we continue to be a strong voice in the community. Not only have we helped to make growth a compelling issue in Marion County through our numerous forums, we've formed strong coalitions with kindred groups throughout North Central Florida. Though we're still a young organization, it seems our identity becomes more apparent all the time: we're at our best when we serve as a community catalyst. This means that we intend to continue identifying and publicizing growth/sprawl related issues, and to spotlight solutions. To do this, we aim to strengthen our coalition of conservation, environmental, and civic groups throughout the region.

Our big focus for the immediate future, however, is the Greenway. This is the 90-mile corridor of wild lands that stretch from Palatka through Marion County to the Gulf. Once slated for the now defunct Cross Florida Barge Canal Project, the corridor is managed by the state for outdoor recreation and animal habitat preservation. And we hope to use the Greenway to focus on our goals. Currently, we are bringing together various organizations—conservation, environmental, equestrian, mountain-biking—along with business and civic interests to accomplish a variety of things. Among them are plans to:

- Bolster state and local land acquisition efforts to “fill in the gaps” of the Greenway, namely the Griffith Property near Rainbow Springs.
- Tie the Greenway to another greenway being formed in Alachua and Levy Counties.
- Unite disparate groups to show to the community and county commissioners that there is strong support for green spaces.
- Explain to the local business com-

munity that “green spaces” have strong economic value and are worth preserving.

- Uphold the intrinsic values of the Greenway—so that its beauty, integrity, and stability will be preserved for its own benefit as well as ours.

Our big event will be a major forum on the Greenway and Green Spaces in September. But leading up to that event we will have two workshops open to the public that deal with certain aspects of the Greenway.

- The first will be on Monday, March 24. Mickey Thomason, a regional DEP manager, will make a presentation on the history, current status, and the economic

Pat Gabriel 352-861-0322

Robert Stenstream 352-861-8559

values of the Greenway at Green Glover Hall at the McPherson Government Complex beginning at 7:00 p.m.

- On April 28, our second workshop will feature Erik Lewis, a private consultant for the Conservation Trust for Florida Organization who will make discuss ongoing efforts to protect green spaces in Marion County and elsewhere in North Central Florida. In addition, Dr. Lee Niblock, the bureau chief of Marion County Resources Bureau, will speak on the county's plans for future parks. This workshop is also being held at Green Glover at 7:00 p.m.

- On May 20, we will have a regular SGC meeting. We hope that Sen. Nancy Argenziano and Rep. Larry Cretul will be available to join us for a sit-down discussion on what can be done legislatively to control the regional water management's giveaway of the state's water. Dr. Ed

Anderson will also give us a heads-up on looming problems connected with waste management and transportation—two issues we plan to do more about in the future.

OTHER ISSUES

*As you know, the County no longer stands in the way of the Dickson Trust, which now has permission to draw 100,000 gallons of water a day from the Silver Springs area. The only good out of this is a measure introduced in the House and Senate by state Sen. Nancy Argenziano and Rep. Larry Cretul that would require state water management districts to inform local governments about consumptive use permits that the districts receive. Other bills call for tougher restrictions on how the water management districts give away a state asset. We applaud any effort to halt the giveaway of our vanishing waters, yet we should also recognize that this proposed legislation would have little effect here in Marion County if our commissioners change the Comp. Plan and approve new developments entitled to consumptive water permits.

*Growth is also putting stress on ambulance services. The City of Ocala, Marion County Commission, Ocala Regional/West Marion Hospital, and Munroe Regional Hospital are considering forming a partnership to provide ambulance service to all residents. At the moment, only Marion County Fire and Rescue and Munroe Regional Hospital offer ambulance services. A consultant has been hired to research this proposal and to make his recommendations. You will be hearing about this in the next few months.

*Currently, we are charged \$57.00 non ad-valorem on our property tax for use of the landfill. Our commissioners propose

see MARION CNTY, next page

MARION COUNTY, from previous page

increasing this amount to \$84.00. This increase may affect citizens who live in gated communities and pay developers for trash in their amenities fees.

*The County has hired a group of consultants to study the 441 Corridor, SR 200 Corridor, and the US 27 corridor and to make recommendations as to how these areas should develop in the next 20 years. The first presentation is on the 441 Corridor and will be made on March 26th at 9:00 a.m. in the county commission auditorium.

*Park acquisition with PELAC funds is also on the minds of commissioners. Recently, the board made verbal offers for properties along SR 200. In the meantime, however, another private buyer made a written offer. That's important because in real estate law a written offer takes precedence over a verbal offer. Even more troubling is that the county's verbal offers were less than the appraised value, leaving many wondering if they were serious about their bids in the first place. The PELAC committee recommended that the county commissioners try again with a written offer that meets but does not exceed the appraised value. The site many hoped would become the location for a sportsplex in the Northeastern section of the county has been sold. So that one also is out of the picture. We will see what happens.

SGC needs money to put on these forums, advertise, and send out postcards and letters and press releases. Send your check to Donna Disclafani, SGC, 405 SE 15th Ave, Ocala, FL 34471. Make sure to provide your name and a correct mailing and e-mail address and phone numbers.

COMP PLAN, from page 3

the developers' table. This will continue the sprawl growth that has eaten up our tax dollars, crowded the schools on the western part of the county (while schools on the east are empty!) and demands new roads. It will continue the slash and burn development pattern that has created empty shopping malls on the east side while newer subdivisions demand more costly urban

infrastructure such as fire and police protection on the western side of Alachua County.

• The next step

The county commission majority directed the staff to finalize the agreement with the developers. There will then be a public hearing on those changes. Once those changes are adopted, we plan to challenge them in court.

Dredge the Suwannee River?!?

BY ANNETTE LONG

At this time, our Federal Government has allotted \$2,000,000.00 to dredge the McGriff Pass of the Suwannee River Estuary in Dixie County, Florida. This dredging has been proposed to open the river to commercial boating traffic from the Gulf of Mexico. The U.S. Army Corps of Engineers in partnership with Dixie County plan to dredge the McGriff Pass for 2.5 miles to a depth of 6 feet at mean low tide. There are some areas in this pass where the depth is only two to four feet. They plan to make the new channel 75 to 100 feet wide. This will cut a gap directly through the Great Suwannee Reef.

The Florida Department of Environmental Protection has recommended denial of the permit. The only issue with the DEP permit is where the spoil will be placed. If the spoil location is changed, the DEP will accept the application and issue the permit.

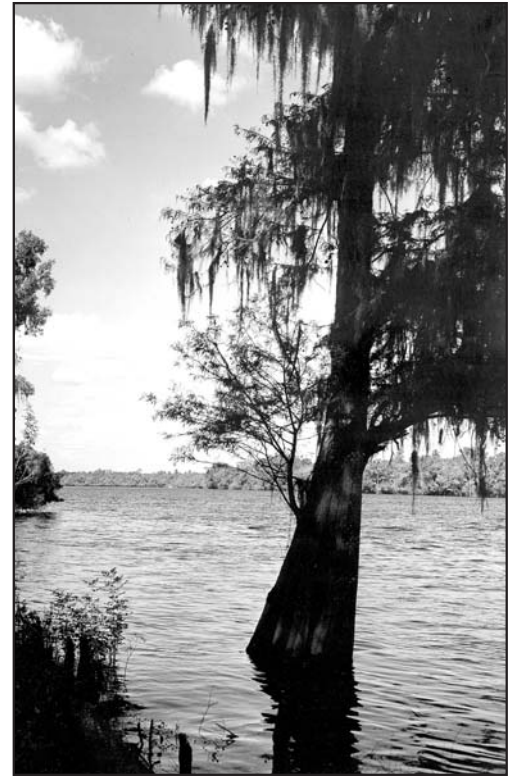

The U.S. Army Corps of Engineers hired a private engineering firm to evaluate the project. A former employee of one of these companies believes strongly that this dredging will permanently damage the fragile ecosystem in the Suwannee Estuary and Suwannee Sound and has publicly stated such. It is believed that by deepening one of the passes, the salinity and flow in the other two passes will be changed. This change would negatively effect two endangered species, the Gulf Sturgeon and the Floridian Manatee.

Once the non-approved conditions have been worked out by

finding appropriate areas to deposit the spoil from the dredging, the applicants will return to the Florida Governor's Cabinet to petition for a permit approval.

Signed petitions in opposition to the dredging will be presented to our State Governor and his cabinet on March 25, 2003. Please write to, e-mail or fax Governor Bush to let him know that

the public does not wish to see an Outstanding Florida Waterway—The Suwannee River—damaged by mismanagement of its estuary and access to commercial boats. He can be reached at: fl_governor@myflorida.com or by fax at: 850-487-0801 or by mail at: PL 05 The Capitol, 400 South Monroe Street, Tallahassee, FL 32399-0001

Significant Ecological Features Overlay District Map

BY LINDA POLLINI

The proposed Overlay Map for the City of Gainesville includes important prioritized and ranked areas for conservation. Rob Brinkman and Linda Pollini attended the meeting. This letter was submitted to the Plan Board for the City of Gainesville to encourage them to pass the Overlay Map onto the City Commission for adoption since it has been before city staff and in their committee for about six months. Staff had deleted the requirement for a special use permit in this district, but we think that it should be put back in for the map to really be effective in protecting the environment from destruction.

City of Gainesville
Plan Board and
City Commission
Gainesville, Florida

Dear Members,

I am here tonight representing the Suwannee-St. Johns Sierra Club. Our members are in favor of your efforts to create and implement a Significant Ecological Features Overlay District. At this time we are suggesting a few improvements in the criteria for the issuance of a Special Use Permit.

The Land Development Regulations need to protect 50% of endangered species of plants in situ. These plants should be determined from federal, state and scientific listings.

The Sierra Club advocates a range of 20-60% over and above required setbacks, depending on the ranked quality

on the overlay map. The flexibility of the overlay district makes it a valuable means of protecting wetlands and other ecological features. The goal would be to cluster development away from significant features on property; thus there would be no net loss of allowable units per acre.

We encourage incentives to produce maximum conservation such as transfer of development rights (TDR's).

Our members also would like the city to seek acquisition of high quality areas within the city, in order to save them from future degradation. The Significant Ecological Features Overlay map is an important part of this process and we'd like you to implement this as soon as possible.

Sincerely,

Linda Pollini

Chair of Conservation

Suwannee-St. Johns Sierra Club

NATIONAL SIERRA CLUB NEWS

STATEMENT OF SIERRA CLUB PRESIDENT JENNIFER FERENSTEIN ON IRAQ WAR

"The Sierra Club opposes the United States' military action against Iraq. We urge all parties to follow a path to peace by ceasing hostilities immediately and allowing U.N. inspectors to disarm and destroy any Iraqi weapons of mass destruction. The best way to support American troops, save the lives of innocent Iraqis, and prevent further environmental devastation, is to halt the fighting and proceed immediately with a peaceful, lawful, UN-sanctioned disarmament.

"Disarmament and destruction of any Iraqi weapons of mass destruction through resumed rigorous United Nations inspections will accomplish the international community's goals without risking more lives, endangering the environment or increasing anti-American sentiment among the Iraqi people and others throughout the world.

"While honest people can disagree about the primary reasons for this conflict, no one can disagree that Iraq is strategically important to our country and the world because of its oil reserves. No matter how long the conflict lasts, we will find ourselves in a similar situation again unless the U.S. and other nations act decisively to cut our dependence on oil and other fossil fuels.

"We can do better, if our leaders will lead. The simplest step would be to require that we reduce our country's dependence on oil by using existing technology to make new cars and SUVs go farther on a gallon of gas. We can also invest in increasing our reliance on wind and solar power, using technologies that generate energy more effectively than ever before. We can implement solutions that will save oil and save lives.

SENATE SCORES CRITICAL VICTORY FOR PROTECTING ARCTIC REFUGE

Washington, D.C. — In a tremendous victory for America's environment, 52 Senators voted to turn back an effort today to drill for oil in the Arctic National Wildlife Refuge. A bipartisan group of Senators prevailed in safeguarding this national treasure and the native people who depend on it, despite heavy lobbying by the Bush administration and the oil industry. Senators passed an amendment to strip Arctic drilling revenues from the Budget Resolution, marking a pivotal vote in the 25-year fight to protect the Arctic.

The Bush Administration tried to advance Arctic drilling through the complicated budget process by slipping in an assumption of \$2.15 billion in expected revenues to the federal treasury from leasing and development of the Arctic Refuge.

When the Budget was brought to the floor today, Senators Boxer offered an amendment to strip Arctic drilling revenues from the bill, which prevailed by a vote of 52-48.

"Today's vote is a big victory for America's environment and the American people, and we're thrilled that a strong, bipartisan group of Senators stood up to protect this spectacular landscape," said Carl Pope, Executive Director of the Sierra Club. "Americans consistently voice support for protecting the Arctic, and today the Senate listened by rejecting this backdoor attempt to drill in this special place."

Drilling in the Arctic is the centerpiece of the Bush Administration's energy policy, and drilling proponents have tried to exploit the current geopolitical situation and concerns about rising gas prices to gain support for drilling.

"Americans are concerned about national security, but drilling in the Arctic will do nothing to alleviate these fears," continued Pope. "Arctic drilling would not put a dent in our dependence on foreign oil, would do nothing to strengthen our national security, and would not save consumers a dime. We cannot drill our way to energy independence."

The United States sits on just three percent of the world's known petroleum reserves. Government estimates indicate that there is less than a six-month supply of oil in the Arctic National Wildlife Refuge, and even the oil industry admits it would take ten years to make it to U.S. markets.

"Should we sacrifice the crown jewel of the refuge system for speculative revenue gains and six months of oil?" asked Pope. "Americans overwhelmingly say 'no.' They support protecting the Arctic Refuge, and today their Senators heard them loud and clear."

Senators Boxer (D-CA), Chafee (R-RI) Feingold (D-WI) Snowe (R-ME), Lieberman (D-CT), and Kerry (D-MA) led the winning effort to strip arctic drilling revenues from the Budget Resolution.

"Senators, both Republican and Democrat, stood firm against tremendous pressure from the Bush administration and its allies in the oil industry," said Pope. "We thank them for their steadfast support in fighting to make sure the Refuge is protected, not needlessly plundered. The Arctic Refuge is too valuable to be just another number in the budget process."

A recent National Academy of Sciences report on the cumulative effects of drilling on Alaska's North Slope reaffirmed the devastating impacts that drilling has already caused in the region and provided further evidence that we need to protect the Arctic Refuge. The coastal plain of the Arctic National Wildlife Refuge is a national treasure—home to polar bears, wolves, and countless migratory birds. The coastal plain is also the birthing grounds for the 129,000-member Porcupine River caribou herd and it is sacred land to the Gwich'in Indians, a native people whose traditional lifestyle depends on the caribou.
