Recycling Your Computer and Yourself

COMPLEMENTARY PROGRAMS ON WASTE

BY KRISTINA JACKSON

Just what are you contributing to the waste stream? Among other things, your body (some day) and your home electronics. The recyclable parts and waste products from both should be kept out of our air and water.

Recycling Electronics

Home electronics contain recyclable materials and parts with heavy metals that should not go to a landfill or incinerator. Alachua County and the City of Gainesville are considering a pilot program for the collection of electronic equipment in the winter of 2003. Curbside collection of electronic waste, or "e-scrap," including computer monitors and television sets, is proposed.

"We aim to, literally, get the lead out," says Gina Hawkins, city recycling coordinator. "Lead and other heavy metals are present in significant quantities in electronic equipment. It is imperative that we keep heavy metals, like lead, mercury and cadmium, out of the landfill and, ultimately, the environment."

The pilot program will target the collection of computer monitors and televisions because they contain lead. The cathode ray tubes in these items contain leaded glass which can be recycled into new products.

Other products with lead-soldered circuit boards, especially computers, may also be collected.

Florida is not as progressive as some states. In an effort to prevent groundwater contamination, Massachusetts instituted a statewide ban on disposal of computer and TV monitors in landfills in March, 2000.

Millions of computers are thrown away

THERE IS NO GENERAL MEETING IN AUGUST.
The next SSJ Sierra Club general meeting is Sept. 4 on National Forest Protection. Come hear Joe Murphy discuss the Sierra Club's proud tradition of protecting America's public lands, and present-day assaults on our natural resources.

every year across the US. The National Recycling Coalition says currently only about 11 percent of computer equipment is recycled, and another 3 percent is reused.

Right now, in Alachua County, computers and other electronics can be dropped off at the Household Hazardous Waste Center at the Leveda Brown Environmental Park, on N.E. 63rd Avenue, off of Waldo Road (Call (352) 334-0440 for hours of operation). Your goods will be reused, if possible, or at least recycled or disposed of properly.

How will you recycle yourself?

First, a plug for organ, tissue and regular blood and apheresis donations: just do it. There is no better legacy than saving a life with your body parts, especially if you weren't using them anyway.

At our July meeting, Larry Schwandes will tell us about some of the drawbacks of traditional burial and cremation.

GENERAL MEETING
Thursday, July 10th, 7:30 PM
 Entomology & Nematology Bldg., UF, on Hull Road
 just east of SW 34th Street and the Center for
 Performing Arts Complex

Inner City Outings

BY KAREN GARREN

The Inner City Outings is a program for kids, youths, and disabled persons, providing opportunities to participate in Nature Outings, go on day trips and go on camping trips.

ICO is a branch of the Sierra Club, a wilderness advocacy group, a voice for conservation and preservation. Volunteer leaders are trained in outings leadership techniques and first aid and safety certified. Participants of ICO outings visit beautiful places like forests and swamps, fun places like beaches and springs, teaching areas like

farms and animal care centers and research stations, and historical places like restored colonial plantations and Indian archeology sites.

Participants will hopefully learn ecological principles, how everything is connected, and how to work together to make healthy, happy communities and how to make a better world.

A new Inner Cities Outings program is starting up in Gainesville, Florida. It will be the 6th in the state and will join more than 500 throughout the USA. The initial steering committee consists of four persons representing Gainesville, Ocala, High Springs, and Orlando. More volunteers are needed. The greatest cause for program failure is volunteer burn-out. The next steering com-

mittee meeting will be July 9th.

The new program needs sponsors, business persons and agencies personnel that are concerned with community quality of life.

An organization with 2 young persons' programs, the Environmental Ambassadors and Girl Power, is interested in participating. A meeting with

them is set up for the end of July to find out what we can do for them and what they would be interested in. Contact Karen Garren at 371-0008, iluvfla@gru.net or Valerie Hiduke at ValerieH@jmco.com, 407-252-5262 for more information about the upcoming meeting. Check out the Sierra Club's ICO web site for more information about the program at <http://mitchell.sierraclub.org/outings/ico/>.

One Club Trip on the Suwannee River

Come join us on July 12th for a canoe/kayak trip on the beautiful upper Suwannee River. The trip will go through a lovely and lightly inhabited stretch of the river from the Spirit of the Suwannee

Music Park to the Florida Boys Ranch. This trip is part of the Sierra Club One Club program where we link our conservation issues with our outings. The conservationist on this trip will be Dr. David

Auth, a long-time Sierra Club member (he is Biodiversity Chair for the chapter). He will be discussing the conservation issues of the Suwannee River. This stretch of river is characterized by oaks, maples,

Off-Road Vehicle Use in National Forests

The majority of this article comes from the very comprehensive review and assessment of ORV use in Public Lands written by Defenders of Wildlife titled "Out of Control"

BY KATHY CANTWELL

Over the past thirty years there has been an exponential increase in Off Road Vehicle (ORV) use in public lands. It has become, after habitat destruction, the most serious threat to our public lands and wildlife survival on those lands.

There are many factors involved ranging from underfunding of support staff for our National Forests to a powerful ORV industry lobby at the state and federal levels.

ORVs come in many forms, from 3-4 wheeled all-terrain vehicles, mud-bogging trucks, jeeps, dune buggies, swamp buggies, and motocross bikes to air boats and personal watercraft. They have given people access to places that not many would have been able to reach three decades ago. The results have been catastrophic.

The biggest problem has been the number of illegal or "ghost" roads that have developed on our public lands. According to Tom Hoctor, an expert in wildlife corridors and the effect roads have on wildlife at the University of Florida, there is a direct correlation between the amount of road density in public lands and the viability of wildlife. Habitat quality becomes impaired when you reach a road density of one mile of road per square mile. Shockingly, it is estimated that 93% of the Ocala National Forest has reached that road density, as well as 87% of the Osceola National Forest and 60% of the Apalachicola National Forest! These roads have occurred in spite of the fact that it is illegal to go off marked and numbered trails.

The impacts are many and complex. They include:

Wildlife disturbance: The noise of roads disturbs many animals feeding and nesting behavior. It also causes them to expend precious energy avoiding the noise caused by

roads.

Vegetation and wildlife habitat destruction: ORVs around wetlands and in wetlands have caused massive damage. The impact on isolated ephemeral wetlands has been monumental, and the unique ecosystem they support may not be recoverable. ORVs tend to encircle these isolated ponds, destroying all the vegetation around them. This then leads to sediment deposition and

erosion into the pond with turbidity problems. The vegetation removal makes amphibians much more susceptible to predation and removes habitat essential for nesting of turtles and birds. In the sand hills ecosystem found especially in the Ocala National Forest, the destruction to native rare plant life such as wire grass has been unbelievable. This leads to many problems, including the inability to do essential burns. It threatens the survival of many endangered species such as the scrub jay and Red Cockaded Woodpecker.

Habitat fragmentation: Roads act as barriers to some creatures, channels for others (such as predators and invasive plants),

avoidance areas for many (leading to habitat removal essentially) and firebreaks.

Soil pulverization and compaction: This leads to many problems including the survival of rare vegetation types to the sheet flow of water in wet prairies.

Noise and chemical pollution: Some ORVs vent 25-30% of their oil and gas into the air unburned. Most produce 50 times as many smog-forming pollutants per mile as automobiles do, and 4000 times more carbon dioxide!

Introduction of exotic species: For example, Susan Carr from Louisiana State University has documented the replacement of perennial grasses by annual and weedy forbs brought in on ORV tracks in southern forests. She also states that introduction of Chinese Tallow and other exotics to wetlands is enhanced by ORV damage.

All this has occurred for two reasons: lack of effective enforcement of existing laws and leniency in permitting group activities in the forest.

What must be done:

1. Reduce overall road and trail density and, to adequately protect roadless core habitat, eliminate or close unnecessary roads and trails.
2. Develop an ORV access and management plan and monitoring programs.
3. Include strict measures for reducing ORV impacts in the access and management plan.
4. Significantly improve law enforcement in the forest:
 - Create a law enforcement task force and enforcement plan for each forest.
 - Establish a toll-free number citizens can call to report violations.
 - Implement a permit system. Require training and a test for obtaining a permit.
 - Increase penalties for violations and increase funding for law enforcement.
 - Institute a volunteer ranger program.
5. Educate users.
6. Plan ORV access points wisely.
7. Reduce road widths.

National Sierra Club Endorses The Earth Charter

PREAMBLE

We stand at a critical moment in Earth's history, a time when humanity must choose its future. As the world becomes increasingly interdependent and fragile, the future at once holds great peril and great promise. To move forward we must recognize that in the midst of a magnificent diversity of cultures and life forms we are one human family and one Earth community with a common destiny. We must join together to bring forth a sustainable global society founded on respect for nature, universal human rights, economic justice, and a culture of peace. Towards this end, it is imperative that we, the peoples of Earth, declare our responsibility to one another, to the greater community of life, and to future generations.

Earth, Our Home Humanity is part of a vast evolving universe. Earth, our home, is alive with a unique community of life. The forces of nature make existence a demanding and uncertain adventure, but Earth has provided the conditions essential to life's evolution. The resilience of the community of life and the well-being of humanity depend upon preserving a healthy biosphere with all its ecological systems, a rich variety of plants and animals, fertile soils, pure waters, and clean air. The global environment with its finite resources is a common concern of all peoples. The

protection of Earth's vitality, diversity, and beauty is a sacred trust.

The Global Situation: The dominant patterns of production and consumption are causing environmental devastation, the depletion of resources, and a massive extinction of species. Communities are being undermined. The benefits of development are not shared equitably and the gap between rich and poor is widening. Injustice, poverty, ignorance, and violent conflict are widespread and the cause of great suffering. An unprecedented rise in human population has overburdened ecological and social systems. The foundations of global security are threatened. These trends are perilous—but not inevitable.

The Challenges Ahead The choice is ours: form a global partnership to care for Earth and one another or risk the destruction of ourselves and the diversity of life.

Fundamental changes are needed in our values, institutions, and ways of living. We must realize that when basic needs have been met, human development is primarily about being more, not having more. We have the knowledge and technology to provide for all and to reduce our impacts on the environment. The emergence of a global civil society is creating new opportunities to build a democratic and humane world.

Our environmental, economic, political, social, and spiritual challenges are interconnected, and together we can forge inclusive solutions.

Universal Responsibility To realize these aspirations, we must decide to live with a sense of universal responsibility, identifying ourselves with the whole Earth community as well as our local communities. We are at once citizens of different nations and of one world in which the local and global are linked. Everyone shares responsibility for the present and future well-being of the human family and the larger living world. The spirit of human solidarity and kinship with all life is strengthened when we live with reverence for the mystery of being, gratitude for the gift of life, and humility regarding the human place in nature.

We urgently need a shared vision of basic values to provide an

ethical foundation for the emerging world community. Therefore, together in hope we affirm the following interdependent principles for a sustainable way of life as a common standard by which the conduct of all individuals, organizations, businesses, governments, and transnational institutions is to be guided and assessed.

This article came from the Earth Charter Summits website.

WANTED! New Outings Leaders!

If you want to get involved and learn more about the environment while having fun, you may want to become an Outings Leader. For more information, contact Julie Thaler at 352-395-7441.

Wilderness First Aid August 23-24 on UF campus, Gainesville. Cost: \$75.

Core Outing Leader Workshop September 12-14, 2003 at Camp Dorothy Thomas in Riverview, FL., 30 miles east of Tampa.

OFF-ROAD, from page 3

8. Keep roads and trails properly signed and maintained.

9. Control traffic on problematic roads and trails by restricting use to daylight hours and establishing and enforcing strict speed limits.

(This is adapted from "Out of Control," a Report written by Defenders of Wildlife. To see the complete report go to www.defenders.org)

WHAT YOU CAN DO:

- Write the Forest Service and tell them you want the wanton illegal destruction stopped immediately! Tell them you want them to stop the permitting, as well, of ORV vehicle "events" where hundreds of ORVs gather for "challenges" like mudbogging and "enduros" (up to 400-mile races) in the forest. They have never denied a permit. Write to Marsha Kearney, USF Supervisor, 325 John Knox Rd. #F-100, Tallahassee, Fl. 32303-4160, or call Kathleen Atkinson, Asst. Supervisor at 850-523-8549,
- Volunteer to help monitor and/or put up signs. Contact local ranger Jer Marr at 352-625-2520

Sierra Club Training Academy Program

The goal of the Academy is to identify, train, and support activists' efforts to carry out the Club's local and national conservation campaigns by organizing Club members and their communities. The Academy program is an intensive workshop program that typically involves 30 to 50 participants from a geographic region.

The weekend of training consists of classroom instruction and challenging simulation exercises that engage the participant and provide both practical skills and new confidence. Specifically, participants

have an opportunity to learn new skills and enhance knowledge in areas such as:

- Establishing clear campaign goals and developing a plan to achieve them.
- Learning how to create public demand for environmental protection.
- Enhancing organizing skills, at whatever level of skill you bring to the program.

• Developing a succinct message with a central theme and stories that resonate with target audiences.

• Learning how to use the media as a primary tactic for winning a conservation campaign.

• Understanding how to use limited financial resources strategically to further conservation goals.

RECYCLE, from page 1

According to E Magazine (March/April 2003), "if laid out head to toe, every person buried last year in the United States would form a line stretching from Los Angeles to New York City," and that does not include those that were incinerated. Along with these bodies, we bury 30 million board feet of mostly virgin wood. We also bury over 90,000 tons of steel; 2,700 tons of bronze and copper; and almost a million gallons of

embalming fluid annually.

Schwandes adds, "There is significant air pollution caused by cremation. Cremations produce the gases of sulfur dioxide and nitrogen dioxide, both of which dissolve in water to form acid. Cremations also produce mercury emissions from fillings in the teeth. With 600,000 cremations each year in this country, over 600 pounds of mercur-

ry are released into the atmosphere."

Now there is a much greener option available. Glendale Nature Preserve is in the Florida Panhandle, Walton County. It is a 350-acre 'ecocemetery' where you can be buried in a long-leaf pine preserve. Glendale is run by a non-profit organization that uses burial fees to help preserve this parcel of land.

SSJ Endorses Community Access

BY SCOTT CAMIL

The SSJ executive committee has unanimously endorsed restoring Community Access TV for Alachua County. We are also co-sponsoring a meeting called Community "Access Gainesville" July 15 at the Thelma Boltin Center. The other sponsors are Civic Media Center, ACLU, Veterans for Peace, Cultural Arts Coalition, Alachua County Library District, City of Gainesville Recreation Department and Access Gainesville.

Every ten years, the City of Gainesville and Alachua County negotiate a contract called a franchise agreement with Cox Communications. The City and County provide Cox with use of public right of

ways among other things and in return Cox provides Public Services like Government Access channels and Community Access also known as Public Access. Federal Law requires cable companies to provide these services if they are asked to do so by the Government authority providing the franchise agreement.

Cox Communications used to provide Community Access here. The local Sierra Club used to air our monthly program on this channel. The local Veterans for Peace produced and aired a documentary called Peace Platoon. Cox trained us in the use of the studio, cameras, lights, sound equipment and editing equipment. We would then schedule time in the studio to do our work and air time to show it.

ATTEND THESE MEETINGS IF YOU CAN:

July 15—Community "Access Gainesville" meeting will be held at the Thelma Boltin Center.

July 17—The Connected Community Task Force will make their recommendations at a joint City/County meeting. This is where citizens can speak to commissioners of the genuine need for the return of Community Access TV in Alachua County.

In the 1993 contract, all of that was left out and now we don't have the service. What we are trying to do is to get the Joint County and City Commissioners to put it back into the new contract this year.

It has been argued that if Cox is asked to give us back our Public Access then they will raise rates on their subscribers. If they did that then it would not be a service provided in exchange for use of the public right of ways. When they discontinued the service they did not lower their rates, which means for the last ten years they have been pocketing that money if indeed they charged for the service in the first place.

We ask all Sierra Club members to contact their County and City Commissioners and ask them to vote to put Community Access back into the contract.

City Commission: citycomm@ci.gainesville.fl.us
County Commission: bocc@co.alachua.fl.us

WEB SITES

1. Townsquare
http://www.townsquarenews.com/COMMUNITY_TV_NOW.html
2. Cox Communications' Public Access Information Website for its Rhode Island service areas
<http://www.patv18.com/>
From the site: "Cox Communications believes that public, educational and governmental access television are all about creating community programming with few or no barriers to the producer. We will provide you with the equipment, the training, the studio space, the airtime and the technical assistance from our support staff to help you make your own program, at no cost".
(THIS IS WHAT WE HAD BEFORE AND WE WOULD LIKE TO GET IT BACK)

Nominating Committee Appointed

Now Calling for ExCom Nominees

The Suwannee-St Johns Group (SSJG) Sierra Club has appointed the following members to the 2003 Nominating Committee (NomCom).

The purpose of this committee is to nominate candidates for the Excom elections to be held in November/December 2003. This year we will be electing seven Excom members. If you are interested in serving on Excom, or know of someone who might be, please contact any of the above committee members. The main

requirements (other than being a current Sierra Club member) are a willingness to work on various tasks and to attend the ExCom meetings each month (only three allowed absences in a year).

Karen Garren	352-371-0008	ILuvFLA@gru.net
Kristina Jackson	352-372-2464	turtle@moonmag.com
Scott Camil	352-375-2563	s.camil@att.net

Under our by-laws, nominees to ExCom do not run for a particular office, but only to become members. Once the

new ExCom has been elected, it meets to elect the 15 officers specified by our bylaws. Bylaws indicate that there should be at least two more candidates than the number to be elected. Thus, we need 9 candidates (including any current Excom members who wish to run for re-election). If anyone wishes to run and cannot get NomCom to nominate them (which seems highly unlikely), they may run by petition. Also, anyone wishing to have an issue placed before the general membership for a vote may do so by petition (contact Roberta Gastmeyer for a copy of bylaws if you are interested in either of these petition processes.)

Guess Who's Coming to Town?

BY ROBERT BRINKMAN

The world's largest retailer, Wal-Mart, a/k/a Sprawl-Mart, living up to its reputation for sprawl, has chosen arguably the worst site in Gainesville for its first super center here.

The proposed site, on the southwest corner of US 441 and N.W. 53rd Avenue, is the headwaters of the Hogtown Creek. This is an area of seepage wetlands and soils that are poorly drained, making these 92 acres unsuitable to build a 220,000 sq. ft. super center, three other retail outlets on out parcels, 170 homes, and 2,000 parking spaces.

Hogtown Creek has been adversely impacted by the urban development in west Gainesville, and millions of dollars are being spent by the Department of Transportation (DOT) on sediment traps that are, at best, a band-aid approach.

Gainesville's namesake creek needs watershed restoration, not acres and acres of impervious surfaces leaching polluted runoff at the headwaters. Despite the fact that the site lies within the well field protection zone, Wal-Mart also wants to site a gas station.

Thus, in order to provide the residents of the area with "always low prices," as well as always low wages, all that is required is to degrade not only an entire creek system but also place the city's drinking water supply at additional risk—what a bargain!

This despite the fact that the area is already blessed with two Wal-Marts, a Sam's Club, and a Target. Of course the Wal-Mart and Sam's Club on N.W.13th Street will likely close, expanding what is fast becoming a black hole of empty big box stores in the area. There are better places to site a super center, such as the east side of Gainesville, which has historically been shunned by developers.

What about the jobs it will bring? Wal-Mart's wages are so low that a majority of Wal-Mart employees qualify for food

New Port Richey, FL, one in four persons arrested by local police were arrested at Wal-Mart, and the local police chief requested the hiring of two additional police officers at a cost of \$54,000.00 for salaries alone.

Shoppers at Wal-Mart are also supporting an economic system that pays sweat-shop wages to workers in developing countries, frequently young children, who work long hours in deplorable conditions to bring us those always low prices. "Wal-Mart is opposed to unionization," reads a company guidebook for supervisors. "You, as a manager, are expected to support the company's position." "While unions might be appropriate for other companies, they have no place at Wal-Mart," a spokeswoman told a Texas Observer reporter.

This super center proposal was defeated by the City Commission on May 27th, 2003; however, at the following meeting Commissioner

Bryant made a motion to reconsider, and the matter has been referred to the Plan Board for review. We will provide updates on this in a future article in the newsletter.

To get involved please contact me at robbrinkman@gru.net, and write to the Gainesville City Commission at CityComm@ci.gainesville.fl.us. Fundamentally, this is a question of who owns Gainesville, and who decides the future of our community.

TO PROVIDE THE RESIDENTS OF THE AREA WITH "ALWAYS LOW PRICES," AS WELL AS ALWAYS LOW WAGES, ALL THAT IS REQUIRED IS TO DEGRADE NOT ONLY AN ENTIRE CREEK SYSTEM BUT ALSO PLACE THE CITY'S DRINKING WATER SUPPLY AT ADDITIONAL RISK—WHAT A BARGAIN!

stamps. Many other communities have experienced a net job loss ranging from 1.5 to 3 jobs for every job a super center provides, due primarily to the loss of small businesses.

There is also the lure of increased tax revenue, however the costs associated with increased traffic, crime, and environmental remediation will far exceed the increased tax revenue. Law enforcement costs alone could negate the property tax revenues. In

TRIP, from page 2

and cypress coming to the water's edge with sandy beaches on one side alternating with rocky limestone outcrops on the other. The trip will be six miles and take approximately 5 hours with time for lunch and a couple of swimming stops. The pad-

dling will be downstream, the pace will be leisurely and appropriate for reasonably fit beginning paddlers. If you have your own boat you may bring it, if not, rental is available at the put-in point. If you wish you may arrive Friday night and camp at the park. Otherwise, we will leave Gainesville early enough to make a 9:00 a.m. put-in. The outing will be co-led by One Club

facilitator Kevin Veach and conservationist David Auth. For more information and to sign up for the trip, contact Kevin Veach at 374-6795 or kveach@gru.net. The trip will be limited to 12-14 people, and you must sign up ahead of time, so please sign up early. It should be a lot of fun as well as educational. The trip is open to members and non-members as well.

JULY 2003 CALENDAR OF EVENTS

July 10, Thursday, 7:30 p.m. General meeting at the entomology/nematology building on UF campus Rm. 1031-1033.

July 12, Saturday. Canoe trip down Suwannee. Contact Kevin Veach at 352-374-6795 or kveach@gru.net.

July 17, Thursday, 7:00 p.m. ExCom meeting. Unitarian Universalist Fellowship Church, in the library.

August 22, Friday at 7 pm, Newsletter folding party, location to be announced

August 23-24. Wilderness First Aid Course Gainesville, FL. Cost: \$75. Contact Rudy Scheffer at 727-726-8375 or rudy@adventuresworld.com.
